- 1. The data used in calculating rate base are averages.
- 2. Calculate those averages by summing the first-of-year and the end-of-year figures for each account and then dividing the sum by two.
- 3. Note: Do not include contributed plant in service, property held for future use, or construction work in progress with utility plant in service. These are not rate base components.

FULL-TIME EMPLOYEES (FTE)

Use FTE numbers where FTE stands for full-time employees or full-time equivalency. FTE can be computed by using total hours worked/2080 hours for a fiscal year. Estimate to the nearest tenth. If an employee works part time for more than one industry then determine FTE based on estimate of hours worked per industry.

Example: An employee worked 35% of their time on electric jobs, 30% on water jobs, 20% on sewer jobs and 15% on municipal nonutility jobs. The FTE by industry would be .4 for electric, .3 for water and .2 for sewer.

Water Services (Page W-18)

General footnotes

We replaced, eliminated and added services along with the East Rhine Street main and road reconstruction project.

We began with 29 active and 3 inactive 5/8 inch services in this project, we eliminated three inactive services, replaced three of the active 5/8' with 2 inch services and replaced 26 5/8 inch services with 1" services and added four new services.

If net additions are greater than zero, please explain financing by following criteria listed in schedule headnote No. 3.

Meters (Page W-19)

Explain program for replacing or testing meters 1" or smaller.

We are in the process of replacing our present meter 1" or smaller with Invensus meters with an outside read. We replaced 73 in 2003, 64 in 2004 and 30 in 2005. We were a bit short handed in 2005 due to the involvement during the East Rhine Street road reconstruction. We evaluate the meters that are replaced by the service the meter is giving, (does it seem to be running slow), the age of the meter or the need to get an meter with an outside read installed to make the reading process run smoother.

Ss. PSC 185.83(2) states "Station meters shall be maintained to ensure reasonable accuracy and shall have the accuracy checked at least once every 2 years." Are all station meters being tested every two years? Answer yes or no. If no, please explain.

I am assuming that a station meter is our well meters. Both our well meters are new since 2002 and we will set up a schedule for their testing.

Hydrants and Distribution System Valves (Page W-20)

General footnotes

We operate each hydrant twice each year and two hydrants are operated a number of times during the year. In previous reports we have listed the number of times of operation. After some discussion we feel that the question is how many hydrants were operated (they all were) and not how many times they were operated.

We are just in the process of putting a program together to identify and test at least one half of the valves every year. We did have an extensive relay and extension of water main and are in the process of replacing our old meters with new meters which uses much of the time of a part time employee.
